

RUTGERS

Office of the President
**TASK FORCE ON CARBON NEUTRALITY
AND CLIMATE RESILIENCE**

President's Task Force on Carbon Neutrality and Climate Resilience Working Group on Climate Preparedness

The Working Group on Climate Preparedness (Working Group 6) focuses on resilience of the University, its outlying facilities, and surrounding communities to higher temperatures, more intense precipitation, and higher sea levels. The working group should be sure to consider responses to both acute physical risks (e.g., heat waves, severe storms) and chronic risks (e.g., routine flooding of coastal facilities).

In addition to University operations, the working group should also consider cross-cutting themes related to: teaching; research; campus culture, engagement, and behavior; climate-positive economic development; and equity.

Questions the Working Group should address include:

- What is the profile of physical climate risks at Rutgers?
- What are the key impacts associated with these risks for the university's research, teaching, and service missions?
- Which populations and groups at the Rutgers are most vulnerable to these risks?
- What universities or other comparable institutions are leading on climate preparedness and resiliency, what approaches are they employing, and what progress have they made?
- What approaches is Rutgers already pursuing to enhance preparedness and resiliency?
- What are the most compelling and impactful approaches Rutgers could pursue to enhance preparedness and resiliency?
- Are there approaches with a clear financial case and low institutional barriers that could reasonably be commenced before the completion of the climate action planning process?

For each proposed approach, consider:

- What are their associated resilience improvements; financial costs and savings; educational, research, and culture benefits; and other co-benefits?
- How would the proposed approach be implemented, and on what timescale?
- What research and planning is needed to implement the approach?
- How would progress be evaluated?
- What are the roles associated with University leadership, chancellor-level units, and other key players?
- Beyond financials, what are the institutional, organizational and cultural challenges associated with implementation, and how might we overcome them?
- What strategies should be employed to ensure the participation and accountability of the full university community?
- To what extent would the approach engage Rutgers' external stakeholders and catalyze broader, climate-positive economic development in New Jersey?
- What equity considerations need to be addressed and managed, how will this be done, and who needs to be involved?

The working group should provide an interim report by April 1, 2020, to serve as input to the interim report due to President Barchi at the end of April. This interim report should clearly identify what is currently known and what additional analysis is needed. Please be sure to address opportunities for early action in this report. The working group's input to the draft final report should be provided by September 30, 2020, to allow for report integration.
